| Power Fail Phones |  |  |
|-------------------|--|--|

**POWER FAIL MODE ASPEN:** The following extensions are to work in a power-fail mode in the event of a major power outage. In such event, these "zero-button" analog phones will work as if the outside number is directly on that phone; it will not be necessary to dial 9 first to dial out. Calls can be received by dialing the outside 925-number. These numbers will only work when there is a power fail at the bottom of the hill. If there is a power fail at the top of the hill, these numbers actually ring into ski school lines. These numbers will operate in this mode only in the event of a power failure.

**Power Fail Phones:**

The following extensions are to work in a power-fail mode in the event of a major power outage. In such event, these "zero-button" analog phones will work as if the outside number is directly on that phone; it will not be necessary to dial 9 first to dial out. Calls can be received by dialing the outside 923-number. These numbers will operate in this mode only in the event of a power failure.

## Telephone Information

### **ASC Telephone Network:**

The Aspen Skiing Company telephone system is a network of eight PBX's tied together to operate as one big system. From any company phone you may dial any other phone with a four digit extension. The extension numbering plan is:

|                 |                       |
|-----------------|-----------------------|
| Buttermilk      | 2000s                 |
| Aspen           | 3300s & up            |
| Highlands       | 3000 – 3200 and 7700s |
| Snowmass        | 4000s                 |
| The Little Nell | 6000s                 |
| ABC (117)       | 7000                  |
| ABC (311)       | 7000                  |
| Riverside       | 7000s                 |
| Sundeck         | 6900s                 |

The extension numbers can be accessed from the outside through the main PBX switchboards ASC: 925-1220, TLN: 920-4600 and LL: 925-3025.

### **Long Distance:**

Long distance dialing is permitted only with an authorization code that is issued by the Information Technology Department. Long distance code requests must be placed by a department manager. To use the code, dial 9, 1 and the telephone number. You will immediately hear a single long tone; you should then input your authorization code number. The call will then go through. The code is issued to each individual and should not be shared. We suggest that these reports be kept for use at budget time. Personal calls should be charged to your personal calling card number. Send an email to [itsupport@aspensnowmass.com](mailto:itsupport@aspensnowmass.com) to request your personal authorization

Changes in Programming your Phone: Each phone has a number of features that vary depending on the type of phone. Changes can be easily made to allow your phone to operate in whatever way you need. Please send an email to [itsupport@aspensnowmass.com](mailto:itsupport@aspensnowmass.com) with special requests regarding changes to your phone.

### **Moves, Changes or Additions (MAC Work):**

As you anticipate moving your office, please think your plans through and call the Hotel IT Help Desk at 6396 or via email to "Hotel Computer Support" or the Mountain IT Help Desk at ext. 7070 or via email to [itsupport@aspensnowmass.com](mailto:itsupport@aspensnowmass.com) as soon as possible to plan the necessary changes. Telecommunications can act most efficiently with an accurate description of the work to be done. A written description on a work order form accompanied by a floor plan sketch is necessary. ASC contracts MAC work which can be billed out up to \$90 per hour. It is essential to get it right the first time and avoid changes wherever possible.

Please remember that some MAC work may require ordering parts and scheduling with vendors, which can take several weeks. Please plan ahead. Such changes may be charged to your department account. Please call the Help Desk at Ext. 7070 with any questions.

## Fax Machines

|   |                       |
